

## Vicor Corporation PFAS Position Statement

Vicor Corporation has become fully aware of the growing efforts to address the possible presence of PFAS in all manner of hardware products, including that of Vicor and the Vicor supplier base.

Vicor certifies that to the best of its knowledge, Vicor components, products and packaging do not contain any of the recognized PFAS substances in amounts which meet or exceed the concentration limits listed below:

1. 25ppb for any single PFAS substance (except polymeric PFAS substances),
2. 250ppb for the sum of all present PFAS substances, optionally with prior degradation of precursors, and
3. 50ppm for any single PFAS substance, including polymeric PFAS substances.

These restrictions apply to the manufacture, placing on the market and use of PFAS substances (intentionally or otherwise added). PFAS Substances are not intentionally added to any Vicor products.

Vicor is actively engaging the Vicor supplier base to identify any PFAS substances found in supplier-provided components, and, if found, to eliminate them.
